

Take a new step as an International Core of Excellence Research Center for Artificial Photosynthesis

Established in June, 2013, Research Center for Artificial Photosynthesis (ReCAP) was recognized by MEXT (The Ministry of Education, Culture, Sports, Science and Technology) as “Core of Excellence at Research Center for Artificial Photosynthesis”, a hub of Joint-Use/Joint-Research in April 2016. The period of authorization is for 5 years, until the end of March 2022. We are planning to internationalize Research Center for Artificial Photosynthesis (ReCAP) as an artificial photosynthesis and related research core from April 2019. In this newsletter, we introduce foreign researchers who have newly joined the international committee of “Core of Excellence at Research Center for Artificial Photosynthesis” as part of the internationalization project in ReCAP.

Professor Michael R. Wasielewski (Northwestern University)

Professor Etsuko Fujita (Brookhaven National Laboratory)

Professor Chia-Wen (Kevin) Wu (National Taiwan University)

Professor Sibudjing Kawi (National University of Singapore)

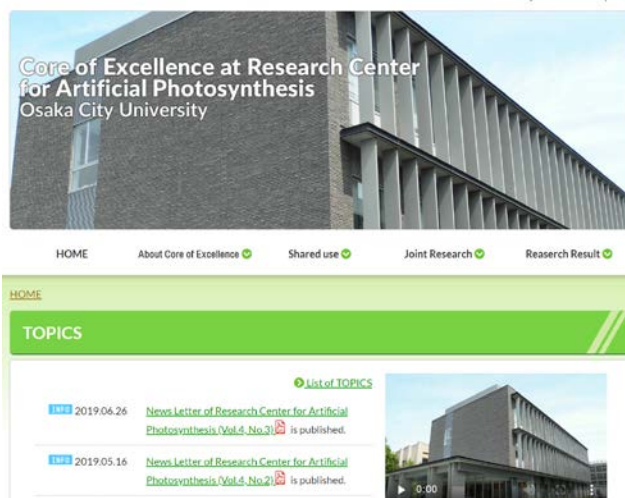

Professor Licheng Sun (KTH Royal Institute of Technology)

Professor Atsushi Urakawa (Delft University of Technology)

The field of expertise of the new international committee bases is not limited to artificial photosynthesis research, but is a leader in

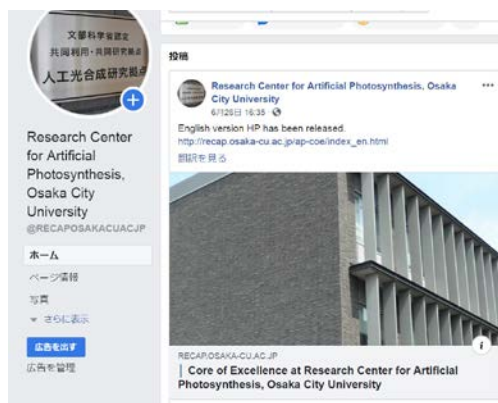

research that leads to new artificial photosynthesis such as molecular conversion of carbon dioxide, porous materials, and biomass utilization.

The ReCAP English version website and Facebook site also have been released. (http://recap.osaka-cu.ac.jp/ap-coe/index_en.html)

You can watch the ReCAP promotional video on the top page of the website. The English version of the newsletter also has been released from April this year. Please access the ReCAP English version website!
